

Tools for Reaching Your Data Backup and Recovery Goals

Free Tools from Unitrends

Never has there been more pressure on IT for continuity. The cost of downtime across all industries has never been higher. Businesses simply can't afford days of downtime while waiting on critical data to be recovered. But IT budgets remain constrained and often split among multiple priorities. Luckily, Unitrends offers a robust set of free tools you can use to jump start your backup and recovery planning.

BC/DR Link

[BC/DR Link](#) provides a FREE online service tool from Unitrends that helps you build and customize your own DR plan so you can confidently respond to a disaster or outage and recover your systems rapidly, effectively, and efficiently.

- Incorporates the latest BCDR best practices and guides you through the process, with plenty of space to attach checklists, instructions, and floor plans.
- Connects the right people, the right way. In the event of a disaster or outage, you can give everyone DR instructions remotely so they can swing into action as a well-orchestrated team.
- Keeps your BC/DR plan securely in the BC/DR Link tool so you can always access it anytime, anywhere.
- Keeps your business current with continuous plan updates and links your team together with mobile checklists. Securely links key people to your DR plan from any smartphone or mobile device.

Free Recovery Time Actual Calculator

This free tool lets you quickly calculate how long it will take to recover the critical VMs in your data center. The [Recovery Time Actual Calculator](#) is highly effective while still maintaining ease of use. It requires no training or product documentation.

- Automates a disaster recovery test and immediately delivers a report telling you how long it would take to recover. Produces Recovery Time Actuals efficiently with no impact on your production environment.
- Provides an easy way to estimate Recovery Time Objectives

(RTOs) for backup, disaster recovery, and SLA plans.

- Supports VMware ESX or ESXi with vCenter 4.0 (or higher) with default ports and VMware guest tools installed.
- Can be run as often as needed to estimate times with different production loads and with any group of VMs. Use as often as you'd like. It is free forever.

Unitrends Free

[Unitrends Free™](#) is free backup software that quickly deploys as a virtual appliance in VMware vSphere and Microsoft Hyper-V environments. You can protect up to 1 TB of data without limitations on number of VMs or sockets.

- Free and unlimited virtual protection/continuity for 1 TB.
- Simple user interface purpose-built for virtualization.
- Community inspired, community driven.
- Contains the robust features admins need.
- Supports Amazon S3 and Google Cloud Storage.

Conclusion

Free tools from Unitrends can help you determine your backup needs and plan disaster recovery. Unitrends Free backup software lets you get started with absolutely free protection for up to 1 TB of production data on virtual machines. As your business and data protection needs grow, you can scale up seamlessly with an upgrade from Unitrends Free to Unitrends Enterprise Backup.
