

## Effortless Backup for AWS Workloads

As an IT professional, you are just as responsible for protecting your organization's data in the cloud as you are for on-premises content. There are countless causes of data loss, such as accidental deletion, file corruption, viruses and many more, that can easily affect data in your cloud-based applications. Do not assume that your public cloud vendor is backing up your data for you. Corporate and industry data protection mandates apply to all your data regardless of where it resides.

Unitrends has partnered with Amazon Web Services (AWS) for comprehensive backup and recovery capabilities in the cloud. Unitrends Backup software can now be deployed in the Amazon cloud as a virtual machine (VM) to protect AWS-based workloads. This integrated AWS and Unitrends solution addresses your cloud data protection requirements, enabling hassle-free retention and recovery strategies to ensure business continuity no matter what.

## Safeguard Data in Your Amazon Cloud-Based Applications With Unitrends Backup

Gain the advantages of cloud computing using AWS and protect those advantages using Unitrends' cutting edge data protection software. Your cloud data protection and recovery needs are fully addressed through the partnership between Unitrends and Amazon. Unitrends' application protection is strong enough to meet the stringent requirements of most industry and governmental mandates. You can even manage the protection of your cloud workloads through the same dashboard of the appliance you use for your on-premises systems. Easily set up automated backup schedules and quickly retrieve lost data no matter how granular or large the data set.

Getting started is simple. Instantly provision Unitrends Backup software through AWS. Upon your request, AWS will spin-up a single VM, hosting Unitrends Backup. You can then immediately start backing up your data from your Amazon-based applications through Unitrends Backup to different servers and storage arrays within AWS. This second copy of your data ensures you can recover from failure or an attack on your primary deployment. All backup, recovery and alerts are managed with an intuitive, easy-to-understand Unitrends software.

## Time-Saving Features

- » **Simple deployment** – Easily provision Unitrends Backup through AWS. Activate it with a Unitrends Backup license obtained through your Unitrends channel.
- » **Enjoy comprehensive best-in-class services** – The combination of AWS and the integrated backup and recovery capabilities of Unitrends Backup software ensures continuity for your critical cloud-based workloads.
- » **Centralized management** – Efficiently use the same intuitive Unitrends management dashboard to backup and retrieve your workloads regardless of whether they are deployed in the cloud or on-premise.
- » **Industrial-strength security** – Unitrends has built-in AES 256-bit encryption for the protection of data at-rest and data-in-flight. AWS already meets many data protection compliance standards for most industries.
