

# Protection and Continuity for AWS Workloads

## Safeguard Data From Your Amazon Cloud-based Applications with Unitrends Backup

**Data can be lost from cloud workloads, too! Ensure business continuity for your Amazon Cloud applications with Unitrends Backup software.**

As an IT professional, you are just as responsible for protecting your organization's data in the cloud as you are for on-premises content. There are countless causes of data loss - accidental deletion, file corruption, viruses - and these can easily affect data in your cloud-based applications. Corporate and industry data protection mandates apply to all of your data - independent of where it resides. Do not assume that your cloud vendor is taking care of your data for you.

To address cloud data protection, Unitrends has partnered with Amazon Web Services (AWS). Comprehensive backup and recovery capabilities from Unitrends can now be deployed in the Amazon cloud as a virtual machine (VM) to protect AWS-based workloads. This integrated AWS and Unitrends solution addresses your cloud data protection requirements, enabling retention and recovery strategies to ensure your business can continue, no matter what.

Protection for data in the cloud with Unitrends Enterprise Backup

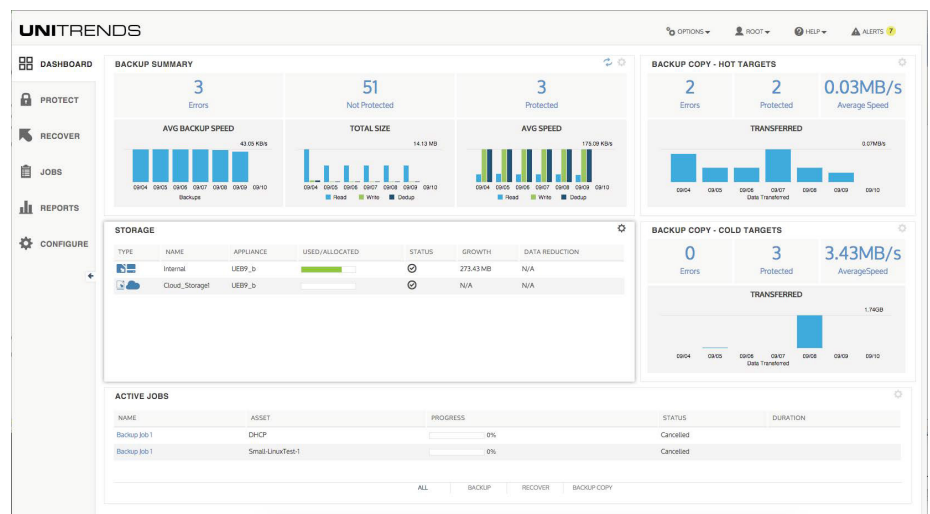

Getting started is simple. Instantly provision Unitrends Backup software through AWS. Upon your request, AWS will spin-up a single VM hosting Unitrends Backup. You can then immediately begin to backup your data from your Amazon-based applications through Unitrends Backup to different servers and storage arrays within AWS. This second copy of your data ensures you can recover from failure or an attack on your primary deployment. All backup, recovery and alerts are managed with an intuitive, easy to understand Unitrends application.

# Unitrends Backup: Cloud Workload Protection in Microsoft Azure

Use Case Brochure

The intuitive Unitrends dashboard manages both cloud and on-premises workloads allowing granular control and uniform protection policies across your entire environment.

Your cloud data protection and recovery needs are fully addressed through the partnership between Unitrends and Amazon. Gain the advantages of cloud computing using AWS and protect those advantages using Unitrends data protection software. Unitrends application protection is strong enough to meet the stringent requirements of most industry and governmental mandates. You can even manage protection of your cloud workloads through the same dashboard used for your on-premises systems. Easily set up automated backup schedules and quickly retrieve lost data no matter how granular or large the data set.

Unitrends Backup Centralized Management Dashboard

## Key Solutions Features:

- **Simple deployment** - Easily provision Unitrends Backup through AWS. Activate with a Unitrends Backup license obtained through your Unitrends channel partner.
- **Enjoy comprehensive best-in-class services** - The combination of AWS and the integrated backup and recovery capabilities of Unitrends Backup software ensure continuity for your critical cloud-based workloads.
- **Centralized management** - Efficiently use the same intuitive Unitrends management dashboard to backup and retrieve your workloads regardless if they are deployed in the cloud or on-premise.
- **Industrial-strength security** - Unitrends has built-in AES 256-bit encryption for protection of data at-rest and in-flight. AWS already meets many data protection compliance standards for most industries.
