

Recovery and Unitrends Backup:

Selecting the Right Backup Deployment

The All-in-One Enterprise Backup & Continuity Solution

No Finger Pointing Solutions

Unitrends all-in-one enterprise backup and continuity provides you with a “one throat to choke” set of offerings that allow you to focus on your business rather than backup. All the functionality you need is in one place.

Recovery Series

Unitrends Recovery Series Backup appliances converge purpose-built backup infrastructure, enterprise grade software, and cloud continuity.

The physical appliances are pre-loaded and pre-tuned with powerful software that not only covers on-premises backup but also long-term retention and disaster recovery in the Unitrends Cloud.

Unitrends Backup

Unitrends Backup software is a full-featured virtual appliance that runs on the hypervisor or cloud of your choice. Integration with the Unitrends Cloud is built-in for long-term retention and disaster recovery. It simplifies local backup and offsite compliance requirements with all-in-one software that provides you with enterprise backup and continuity.

SCALE UP AND OUT

Your digital assets are growing exponentially. Compliance requirements demand longer term retention. Businesses need backup that is easy to setup and scale up and out to the Unitrends Cloud, AWS or Azure. Unitrends all-in-one Recovery Series appliances deploy quickly and scale up and out to the cloud as your business grows.

As your needs evolve, you have the option of moving to a larger Unitrends appliance. Scale up and out by adding appliances within a single site or at remote office/branch office (ROBO) sites. Or extend to the cloud. Integration is built in for the Unitrends Cloud as well as third party clouds including Amazon Web Services (AWS) and Microsoft Azure. All managed from a single, intuitive interface.

- Easily scale up & out from 2 TB, with bundled, predictable pricing.
- Quickly add appliances to protect growing data — just rack, connect, and go.
- Seamless integration with the Unitrends Clouds for long term retention & disaster recovery spin-up.

Please see the comparison chart on page 2.

PRODUCT COMPARISON CHART

Unitrends Solution v. Traditional Backup

A look at how Recovery Series and Unitrends Backup Software stacks up against competitive software providers' products.

Benefits	Recovery Series Appliances	Unitrends Backup Software	Traditional Backup Software
