

## Spanning Backup for Salesforce

It's no longer adequate to only back up key on-prem servers. A myriad of threats to your organization's key Salesforce data makes backing it up a necessity. Unitrends SaaS Backup, delivered with the Spanning brand as part of the Kaseya solution, protects your customer data and your organization with enterprise-class, automated backup. Spanning Backup is designed to work natively within Salesforce and provides automated backup and recovery within the Salesforce interface.

### Why You Need Salesforce Backup

Human Error

Malicious Insiders

Illegitimate Deletion

Malware and Ransomware

Programmatic Errors

Hackers

Spanning Backup for Salesforce eliminates the need for manual Export Service and provides daily, automated backup and rapid restore of all your critical data, attachments, files and metadata. Seamlessly back up **base objects, custom objects, metadata, attachments, files, Force.com apps and Chatter posts** — with no limits on retention or versions. Plus, back up Salesforce data using your own encryption keys at no additional cost.

## TRUSTED BY MORE THAN 1.4 MILLION USERS.

## Product Overview

Spanning Backup for Salesforce runs in the background, providing daily, automated backup at the time you specify, and discovers changes in your Salesforce org automatically for backup. Recovery is comprehensive, easy and flexible with several options, such as end-user self-service, point-in-time restore, granular search-based restore, cross-org restore and sandbox seeding.

With Spanning Backup for Salesforce, you can restore data and metadata from any point-in-time backup. Recover metadata into the same org or cross-org for 17 different metadata types, including Objects, Reports, Dashboards, Emails, Layouts, Triggers, Workflows, Classes, Pages and more, directly from Spanning and within Salesforce, without using other tools.

End-user self-restore helps you save IT administrator time by empowering your Salesforce end users with on-page restores. Lightning-certified and built directly into the Salesforce interface, Spanning makes recovery a seamless, intuitive part of the Salesforce experience.

## Best-in-Class SaaS Security

For today's IT staff and MSPs, security and compliance are top of mind. Spanning Backup employs multiple layers of operation and physical security to ensure the integrity and safety of your data and help you meet compliance requirements. **Our security features include:**

**SOC 2 Compliance**

**Intrusion Detection**

**Application-Level Authentication**

**Compartmentalized Access**

**Strong Encryption**

**HIPAA Compliance**

And more!

## KEY FEATURES

### Comprehensive protection

Back it all up: base objects, custom objects, metadata, attachments, files, Force.com apps and Chatter posts — with no limits on retention or versions. Back up data using your own encryption keys at no additional cost.

### Automated

Spanning runs in the background, providing daily, automated backup at the time you specify — and discovers changes in your Salesforce org automatically for backup.

### On-demand backup

You can run a manual backup any time, on-screen from Spanning in your Salesforce environment — useful before major imports or new customizations.

### Status monitoring

View your customizable Spanning dashboard for the state of your most recent backups — with record counts of changes for your most important object types — and Salesforce API usage. Get backup and recovery notifications through Chatter posts and email.

### Transparent reporting

Use the audit log for an immutable, detailed record of every action done by any user within Spanning. Drill down into any backup or restore for details, including error reporting and guidance.

### Point-in-time restore

Restore data and metadata from any point-in-time backup. It all goes directly back into your Salesforce environment the way it was, quickly and accurately.

### Granular restore

Recover specific fields of a record or entire records that were updated or deleted. Restore related child records or overwrite field values during restore — you choose. Then, restore just what you need.

## Metadata restore

Recover metadata into the same org or cross-org for 17 different metadata types, including Objects, Reports, Dashboards, Emails, Layouts, Triggers, Workflows, Classes, Pages and more, directly from Spanning and within Salesforce — without using other tools.

## Cross-org restore

Easily restore data and metadata from one organization into another, with an option to anonymize specific fields during restores.

## Sandbox seeding

Quickly seed sandboxes with the option to anonymize specific fields.

## Close Salesforce integration

Lightning-certified and built directly into the Salesforce interface, Spanning makes recovery a seamless, intuitive part of the Salesforce experience.

## End-user self-restore

Save admin time by empowering your Salesforce end users with on-page restores. They can quickly restore those fields of records that they have edit rights to, directly from the record pages.

## GET STARTED

Spanning Backup for Salesforce provides automated backup and seamless self-service recovery that you can trust for Salesforce data, metadata, attachments, customizations and Chatter messages.
