

## Release Notes for Recovery Series, Recovery MAX, ION/ION+, and Unitrends Backup

Release 10.9.1 | Document Version 1.03142025

This document describes the enhancements and fixes introduced in the 10.9.1 release.

- Resolved a resource contention issue while indexing large backups.
- Resolved an issue where the active jobs page was sometimes slow to load.
- Fixed issues where appliance emails could be sent without images.
- Fixed a logging issue for Windows agent backups.
- Resolved issue when pairing existing asset to a new appliance.
- AlmaLinux 9 appliances are being updated from AlmaLinux 9.2 to AlmaLinux 9.5.  
The first of two updates to complete this occurs in this release.
- Improved volume handling during certain bare metal restore scenarios.
- Improved error handling in the hot copy queuing process.
- Improved management of appliance free space.
- Improved package cleanup during software updates.
- Added additional resiliency when attempting to work with large 3rd party cloud cold copy buckets.
